

Accrual Monitoring

The Accrual Monitoring subcommittee of CLINPOC is adding several new methods of monitoring. We will be actively monitoring protocols with zero accrual after being open for accrual for three months or more. Investigators will receive an email correspondence requesting an explanation/justification for the accrual issues.

We will also be identifying rapidly accruing trials and notifying Investigators. The purpose of this process is to be sure that the protocol is being actively monitored by the study team for adverse events and that data is being collected in a prospective timely manner.
